实验一

Fun with LED's

Arduino

- www.arduino.cc (官网)
- http://www.arduino.cn (中文社区)
- http://study.163.com/course/introduction.htm?courseId=194002# /courseDetail(初级教程)

• ftp资料: ftp://stu_wh:cpp_2012@my.ss.sysu.edu.cn

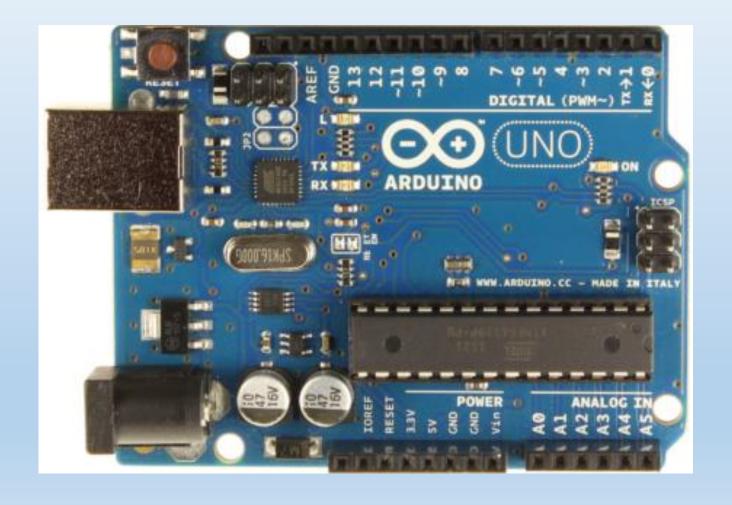

安装IDE

- https://www.arduino.cc/en/Main/Sottware (IDE下载)
- Zip版解压即可

Windows Installer Windows ZIP file for non admin install asy to Mac OS X 10.7 Lion or newer Linux 32 bits pen-Linux 64 bits Linux ARM (experimental) Release Notes Source Code Checksums (sha512)

开发板

- Arduino Uno
- http://kb.open.eefocus.com/index.php?title
 =Arduino_Uno (详细 参数)

开发板

- Arduino Due
- http://www.arduino.cn/thread-2216-1-1.html (详细参数)

开发板

Arduino Mega

• http://kb.open.eefocus.com/index.php/Arduino_Mega_ADK (详细 参数)

ANALOG IN

*** ANALOG IN

** ANALOG IN

*** ANALOG IN

*** ANALOG IN

*** ANALOG IN

*** ANA

连接

• 用数据线将开发板和IDE(电脑)连接

• Uno和Mega开发板用USB-TTL数据线

• Due开发板用安卓线(连接programming port)

连接

- 在IDE上选择对应的开发板:工具->开发板
- Due板需要安装相应的包:

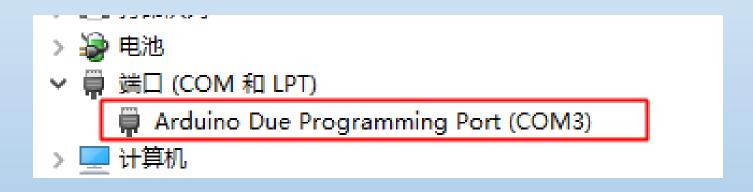

工具->开发板->开发板管理器->搜索due->安装

连接

• 在IDE上选择对应的端口:工具->端口

• 若没有显示端口,可到设备管理器中查询

• 若端口无法识别设备, 右键更新驱动程序

编程

• 程序至少包括两个函数:

Setup函数用于初始化, 只运行一次。例子为将 13号数字引脚设为输出。

Loop函数为一个死循环, 在初始化后运行。例子 为令13号引脚循环输出 高-低电平。

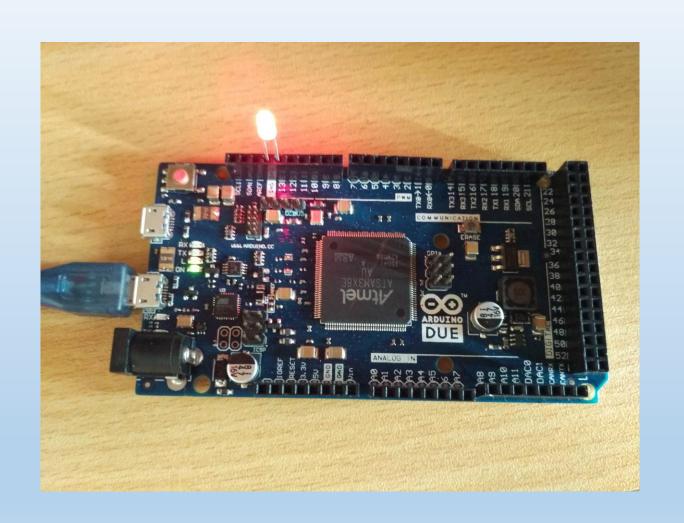

点击验证进行编译,编 译成功后点击上传将程 序烧入开发板。

```
// the setup function runs once when you press reset o
void setup() {
 // initialize digital pin 13 as an output.
 pinMode(13, OUTPUT);
// the loop function runs over and over again forever
void loop() {
  digitalWrite(13, HIGH); // turn the LED on (HIGH i
                     // wait for a second
  delay(1000);
  digitalWrite(13, LOW); // turn the LED off by mak
  delay(1000);
                         // wait for a second
```

测试效果

• 将LED灯连上开发板,即可 看到led灯闪烁的效果

(长端为正极,连接13号引脚;另一端解GND)

实验1: Fun with LED's (3 pts)

- You have 6 LED's in your kit.
- Wire up more to make a simple shape (bar,square)
- Program controller to display a light pattern in your shape
- Example: Make a volume meter that fills up and goes back down
